I'm a passionate developer with firm belief in responsive web design. I like working on both front-end and back-end side of the project. I'm an energetic and ambitious person who have developed a mature and responsible approach to finish task on time. Currently looking for a job where I will be able to learn & contribute with both my leadership and technical skills.

Skills

- Angular
- ReactJs
- SASS
- .NET
- SQL
- Nodejs
- MongoDB
- HTML
- CSS
- TypeScript
- JavaScript
- C#
- PHP
- Team Management

Experience

JULY 2019 – SEPTEMBER 2019

Technical Documentation Specialist / Rapples Entertainments Limited [Part time]

As a technical documentation specialist one of my responsibility was to prepare documentation of system architecture, APIs and variables used in different part of the project, so that Front-end, Back-end & ML engineers can work in harmony with the defined APIs and Variables. Another responsibility was to prepare documentation of clients about how we are designing the system as per their requirements and also about the progress of the project.

Education

2014

Higher Secondary Certificate (HSC) Dhaka City College

GPA: 5.00 out of 5.00

JULY 2020

BSc in Computer Science & Engineering North South University

CGPA: 3.34 out of 5.00 [87-89%]

Projects

For my personal and academic projects, I have worked with many technologies like Angular, React, firebase, Nodejs, MongoDB, .NET, PHP, etc. These are few of my projects, Please, visit my [GitHub](#) to see more of my works.

- **Food Recipe web app using Angular & Firebase**

A Food recipe website where user have access to many food recipes. Registered user can add their recipe to DB by logging into their account. Angular used to developer the front-end, Firebase real time database for storing recipe data & user authentication.

- **Hotel Booking Website UI using React**

A complete hotel booking website UI was developed using REACT with various API integration like contentful API to show dynamic data in the UI

- **Tourism Package Buying E-Commerce Web App using PHP**

This web application is a full e-commerce website where user can buy different tour package. Sandbox Paypal payment method was implemented in this project. PHP, Ajax, MySQL DB, HTML, CSS, JavaScript were used to develop this project.

- **Food Delivery web App using .NET MVC**

A complete food delivery website with 4 different access type for customer, vendor, delivery persona and admin. Admin can add new vendor and delivery guys where customer can only order while logged in and can see full status of where his/her food is for example if it's still cooking or picked up by delivery etc.

Courses & Training

- **The Complete JavaScript Course**, By Jonas Schmedtmann, Udemy

Certificate: <http://ude.my/UC-1ed35cd5-e0f0-4453-9dcf-d06a09c5e2ff>

- **Angular-The Complete Course 2020**, By Maximilian Schwarzmuller, Udemy

Certificate: <http://ude.my/UC-c664a93c-0655-432a-ab99-99ec568b0264>

- **Complete guide to build an app with .NET & Angular**, By Neil Cumming, Udemy.

Certificate: On going course
